PRODUCT DESCRIPTION

Available for immediate purchase are five units of the Bombelli APT-3200 container dolly, a proven and dependable solution for airport ground handling operations. Manufactured in Italy by Bombelli in 2007, these dollies are designed to transport a variety of ULD containers, including LD3 (with capacity for two at once), LD6, and similar types. Each dolly features a robust, galvanized steel frame for long-term durability in demanding environments, along with a turntable platform that allows for smooth and precise maneuvering during loading and unloading.

The payload capacity is 2,050 kilograms, making these units ideal for handling heavy container loads efficiently and safely. The rear tow hitch is equipped with a Rockinger 2440 B automatic coupling system, and a practical parking brake is engaged simply by placing the towbar in the upright position.

With dimensions of approximately 4,120 mm in length, 1,790 mm in width, and a height of 545 mm (towbar upright), these dollies offer a compact footprint while maintaining excellent stability and capacity. Each unit has a self-weight of around 1,150 kg and remains in functional, used condition, ready to be integrated into your handling operations without delay.
